Privacy Isn't Guilt

Sam Aurelius Milam III

All too often, I hear somebody declare, "I don't care if they (tap my phone, read my mail, bug my house, etc.), I have nothing to hide!" Such a statement is reliable proof of brainwashing.

If privacy is demanded only when there's something to hide, then the demand for privacy is, in and of itself, an overt admission of guilt. Privacy should be demanded every time, in all situations, regardless of the circumstances. Then, the cops can't tell the difference. Even when there's nothing to hide, there's still something to protect: the ability to demand privacy without admitting guilt.

Letters to the Editor

Dear Sam.... [Re: May issue]

a) Some mighty good articles, & quips & etc. That's usual. Some more than others; this, on the more side.

b) Nice to see the ltr of Robert asking about the "koolaid kid" ☺. I have tried to write you a proper letter every day for several months, as top priority, but all is so far into overwhelm status w/ 1-2 hours of sleep a nite that I never get to but about 1/100 of 1% of my highest daily priority piles of "must do today!" items....

c) Sam, you have more courage than anyone I know to say what you believe when it's totally unpopular, even (& especially) among those who are supporters of you (moral support & sometimes otherwise) that's usually dependent on their believing that you believe as they do. For most, it's just too high of a hurdle to say to these "comrades" — "but wait! I disagree w/ you on this very delicate issue...." — so I commend you for that, to an extraordinary degree. I've seen that in you many times before but in this case, in referring in particular to the issue of homosexuality, homophobia (so-called), condoms to prisoners, etc. whether you actually conveyed "I disagree" or "I might disagree in some respect" even staying neutral for now, my point remains the same. But there's a lot more to this subject, some of which should be aired (so I will), besides the fact that condoms, especially in prisons, aren't used only for sex among males with males. (And besides the fact that some male prisoners do get it on w/ certain female employees — not all that more).

d) But this provides an occasion to expose what I am concerned was CDC staff's real underlying reason for the greatest horror of

prison life, above all others: double-celling. I believe without doubt, after decades of observation & examining, that certain militant homosexual promoters behind the scenes established double celling for proliferating homosexual practices, (& for the ultimate cruelty, secondarily). So, to whatever degree homosexuality should be condemned, as I believe it should be, the primary condemnation for most of it should fall on these ones who in their hidden wickedness, have caused most of it. So if there is to be a "hell" of punishment for it (figuratively or otherwise, religiously or otherwise), the hottest hell, the most & worst of it, should be reserved for these perpetrators. Whether well known or not, whether usually admitted or not, when known, (usually known, usually not admitted), many red-blooded strictly heterosexual males, simply cannot go for years & years or decades upon decades, or facing the reality of the rest of their natural lives in prison, without the normal, natural sex/passion/love drive being fulfilled and eventually succumb to sexual practice with another male if the circumstances present an ideal opportunity. Not all, but a very high percentage, maybe even most. This goes for the most anti-homosexual men in the world; & those who never had & are sure they never would have a sexual or love interest in another male — but time without any normal (heterosexual) outlet changes that — often. I've seen it happen, i.e., become aware of it happen too many times to be rebutted. And it's a proverbially known aspect of reality. It happens. Despite, "oh no chance of so-&-so." It happens. (Not everyone, but many — proverbially). And my main point is that those who created the double-celling horror knew this, →

well knew it, and how it would proliferate homosexuality among thousands of men (tens of thousands in time) who never would otherwise have engaged in it, but for this condition. Couple that with the unhidden facts that many in political positions especially in California (the leader of all such prison movements for many decades) are militant homosexual promoters & that is about enough for me to determine they did it deliberately with this agenda and this goal as their driving force (excuse the pun). There is much more evidence that could be added to this but this should be recognized as one of the roots of this scourge. A major one.

And, Sam, I agree, the forced imposition of ideas & control of behavior is worse than these practices (behaviors), and I hope your message in that regard will reach the thinking part of the mind of many prisoners who too rarely think for themselves — most are followers of the flock who are all non-thinking followers of the going trend.

—a prisoner

Hi brother. Sorry it's been a while since I've wrote. I've been busy holding on to my hat at this screwed up new world order bull ride called Salinas Valley State Prison. I should have expected it, across the street at old Soledad is where the modern prisoner movement for civil rights started in the 1960's & 70's. (Read “Soledad Brothers” by George Jackson to get the full understanding). Anyway I'm in “the hole — the clink — AD-SEQ,” whatever you wish to call it, right now for becoming friends with a female staff so they are ejecting me from their little M.M.A. school and transferring me to Kern Valley State Prison which has had 8 murders within the last few months from what the guards tell me. Well hell, I'm going to miss the 4 to 10 fist fights on the yard every day here, and sitting in the dirt most every yard, and the pepper dust bombs, pepper spray, and block gun rounds whizzing past my

head. I myself only had one fight here, over a fool bullying smaller prisoners.... Anyway got your last 2 newsletters, May & April 2016. Really enjoyed them. I want to comment on the condoms. I don't like the homo shit going on personally. But I agree with the prison system issuing these condoms because HepC and HIV is a big problem in these prisons. And these young kids come in here off the streets with short sentences, no guidance, and blue balls and they start screwing these drag queens and prison punks who are so polluted they probably glow in the dark. And these kids pick up these contagions in prison, then go out to the streets and screw their girlfriends and spread shit to them they caught right in prison. So condoms are at least an effort by the beast to clean up and prevent it's spread of foulness into the public once these prisoners are released. Now, I also agree with a prisoner on the point that free syringes need to be given to prisoners who use drugs by syringe (May Newsletter).

Also on your photos of the two El Salvador prison cages, I've been in the same conditions right here in California — Los Angeles County Jail over crowding. I've had to sleep outside on roof before — I've sleep 8 in a 6 man cell. No room to move. I've been in holding cells in prison system so crowded no one can move. Just bunched in, no one can sit down. No room. Just yesterday I spent 8 hours in a very small cage in this prison's “hospital”, smaller than a phone booth. Very uncomfortable. I've been put in cages like that 100's of times, sometimes 16 hours, over the span of my thrall! Your Uganda picture = you got me on that one! ☺ But just because I haven't witnessed those conditions in the States don't mean they don't exist in one of the hell holes within our borders.

Solidarity Sam!

An Observation Regarding Human Nature
Sam Aurelius Milam III

There's an aspect of human nature that comes down to us from even before the dawn of our species. It's hard-wired into our genes. The fanatic ravings of the evangelistic social reformers haven't changed it, nor will they. It is this. If she's postpubescent, that is, old enough to be interested, capable, and attractive to men, then she's old enough. As the feminists like to say, “get used to it.” ☿

Beyond the Asymptote

Sam Aurelius Milam III

I like to watch documentaries but I tend to not watch the ones about the universe. When some scientist begins to pontificate about the Big Bang or some other such idiotic notion, I get annoyed and change the channel.

A while back, I was clicking around the channels, looking for something to watch, and I happened upon a scientist just as he assured me that it's impossible to travel faster than the speed of light. Damn! I changed the channel.

Here's one problem. The speed of light isn't exactly the same at all times and in all places. An absolute limit that isn't constant doesn't seem to me to be a very credible absolute limit. Even if the limit is taken to be the speed of light in free space, then I'm still skeptical. By the time that they get through postulating gravitational warps, and other such notions, I'm not sure that the idea of free space is even meaningful. See my essay [Cosmology and the Law of Parsimony](#). It's available on *Pharos*.

Another problem is the equations. As I noted in my essay [There's An Arrow In The Logic -or- Who Says Pie Are Square?](#), mathematics doesn't prove anything. It only describes an understanding of things. The present equations show an asymptote at the speed of light. That asymptote is relevant for length contraction, time dilation, increase in mass, energy requirements, and so forth. I found a graph on Wikipedia, showing an example. See the picture.

Based on such considerations, the scientists proclaim that travel above the speed of light is impossible. That isn't necessarily true. I recall from somewhere in my past studies that such equations can also be plotted on the other side of the asymptote, resulting in an inverted mirror image of the plot as it's shown on the near side. If that's true, then the equations don't describe a universe in which travel above the speed of light is impossible. They describe a universe in which travel at the speed of light is impossible. That's a very important difference.

Of course, there's the problem of acceleration.

To accelerate from one speed to a different speed requires traveling at all possible speeds in between. To accelerate from just below the speed of light to just above the speed of light would require traveling, however briefly, at the speed of light. The asymptote would then be an impenetrable barrier. But not necessarily. The problem isn't speed, but acceleration.

According to its mathematical description, acceleration is the change in speed over the change in time, $\Delta v/\Delta t$. If $\Delta t = 0$, then acceleration is meaningless. Notice that Δv doesn't have to be zero in order for that to be true. If we can figure out how to change speed without accelerating, that is, to change speed instantaneously, then given sufficient energy, we can skip the asymptote and exceed the speed of light.

Newton's Second Law ($f = ma$) tells us that

the force necessary to accelerate a mass is equal to the desired acceleration multiplied by the size of the mass. Solving for a , we get $a = f/m$. So, when $m = 0$, acceleration is again meaningless. Zero mass isn't as silly as it might seem. Photons have been described as massless particles. So, if we can nullify mass, then we might be able to change speed instantaneously.

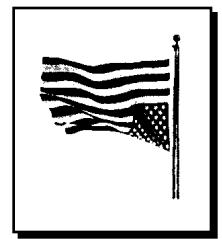

Those are, potentially, two clues to a theoretical strategy that might allow us to skip

the asymptote. Maybe it's impossible but, so far as I'm aware, the equations don't so indicate. If the equations are wrong, then we need to correct them. If they're correct, then all that we need to do is to figure out how to reduce mass to zero and change speed without acceleration. Those aren't even new ideas. They've been around in Science Fiction for decades.

Remember those pundits who like to brag that science has overtaken Science Fiction, or will soon do so? In some cases, they're correct. For example, my cell phone is every bit as amazing as Captain Kirk's tricorder. So, science has overtaken Science Fiction in some ways, but not in all ways. Science hasn't yet gone beyond the asymptote.

The asymptote at the speed of light, from https://en.wikipedia.org/wiki/Speed_of_light as downloaded on Friday, May 27, 2016.

Nation in Distress

The least productive people are usually the ones who are most in favor of holding meetings.

—Thomas Sowell

The amount of manpower eventually wasted by a meeting is directly proportional to the number of employees in attendance and exponentially proportional to the number of managers in attendance.

Country Music Lyrics

Original Sources Unknown. Forwarded by Don G. These might not be actual lyrics, I don't know, but they are funny, some of them. —editor

- My John Deere was breaking your field while your Dear John was breaking my heart.
- She got the gold mine and I got the shaft.
- Sooner or later, you're gonna be mine. If it has to be later, how 'bout later tonight? ☺

Puns

Sam Aurelius Milam III

Q: What do you call a Muslim cleric who owns a dairy herd?
A: A milk sheik.
Q: What do you call a monk who makes shapes from wood or stone?
A: A chipmunk.
Q: What do you call a perfect burglary?
A: A stainless steal.

ate receiving a courtesy copy of any document or publication in which you reprint my material.

Submissions — I consider letters, articles, and cartoons for the newsletter, but I don't pay for them. Short items are more likely to be printed. I suggest that letters and articles be shorter than 500 words but that's flexible depending on space available and the content of the piece.

Payment — This newsletter isn't for sale. If you want to make a voluntary contribution, then I prefer cash or U.S. postage stamps. For checks or money orders, please inquire. For PayPal payments, use editor@frontiersman.org.uk. In case anybody's curious, I also accept gold, silver, platinum, etc. I don't accept anything that requires me to provide ID to receive it.
