When is the human population expected to reach 9 billion?

All News Images Books Maps Videos Search tools

AI Overview

The global population is projected to reach 9 billion **around 2037**, according to official United Nations Population Fund estimates. This milestone comes roughly 15 years after the world crossed the 8 billion threshold in November 2022.

Projection Timelines

Different organizations estimate slightly different arrival years for the 9 billion milestone based on shifting birth and death rates:

- **United Nations:** Projected for **2037** (or 2036 in some demographic models).
- **U.S. Census Bureau:** Projected for **2039**.

Growth Factors

- **Slowing Growth:** The overall growth rate of the human population continues to slow down. It took 12 years to go from 7 to 8 billion, but will take about 15 years to go from 8 to 9 billion.
- **Regional Concentration:** Much of the future growth toward 9 billion is concentrated in sub-Saharan Africa and other regions with higher fertility rates.

Would you like to know more about projected population peaks or **regional growth trends**?
